Education

RICE UNIVERSITY, Houston, TX – Bachelor of Science Mechanical Engineering, Minor Business **May 2025**

SHASTA COLLEGE, Redding, CA – Associate of Science Social Science **May 2021**

NOTE: (Associate of Science was completed during high school)

Experience

Mechanical Engineer, Greenfield Milling **Amarillo, TX; June 2025 – Jan 2026**

- Managed \$3M in packaging and mixing system projects across three facilities, from concept through commissioning
- Designed \$700K mixing plant producing up to 3M LBS/Month, integrating material handling and process controls
- Implemented automated VFFS packaging achieving 7000+ LBS/HR, optimizing labor efficiency and reliability
- Led cross-functional teams in production, quality, and maintenance teams to streamline operations and boost uptime

Mechanical Engineer, Team Pressing Matters **Houston, TX; Sep 2024 – May 2025**

- Led design and prototyping of precision ink dispensing system for biomedical screen-printing applications
- Directed CAD development, and testing of fluid and squeegee systems, achieving modularity, and manufacturability
- Coordinated interdisciplinary collaboration between mechanical, electrical, and bioengineering teams to meet milestones

Research Analyst Intern, S&P Global **Houston, TX; Jun 2024 – Aug 2024**

- Built a forecast accuracy model, achieving 90% short-term and 70% long-term accuracy for energy price projections
- Developed margin forecasting tools for refining units and retail pricing models for fuels at county and state levels
- Created a data-driven demand calculator improving regional market insights and supporting executive decision-making

Pipeline and Power Intern, Chevron **Bakersfield, CA; May 2023 – Aug 2023**

- Designed P&ID diagrams and conducted simulations for cogeneration systems wastewater, using PipePhase
- Analyzed system and projected data, for selecting wastewater pumps capable of 20K+ gallons per day
- Investigated Cogeneration plant design, specifically dry low-NOx combustion units, to limit chemical pollutants
- Proposed a mechanical maintenance plan, for oil mist eliminator unit, reducing pollutants and increasing plant safety

Wells Plugging and Abandonment Intern, Chevron **Midland, TX; May 2022 – Aug 2022**

- Implemented new shape charge perforation and plugging tool, reducing operations time by 25%, and costs by 10%
- Led evaluations of plugging materials and methods, influencing vendor selection and quality assurance standards
- Conducted safety reviews regarding the handling and use of explosives and chemicals on the Ground and in Well
- Researched Well perforations technology, resulting in a comprehensive analysis, and proposal for cost savings

Mechanical Engineer, Rice Emerging Scholars Program **Houston, TX; June 2021 – Aug 2021**

- Led the design and prototyping of a hand-grasping assistive device, progressing from low to mid-fidelity prototype
-

Skills And Awards

CAD Software: SolidWorks, Onshape, Microsoft Office (Word, Excel, PowerPoint), PipePhase

Programming Languages: Python, C++, MATLAB

Hardware: 3D Printing, Prototyping and Product Design, Metalworking, Woodworking

Awards: Eagle Scout, The Vigil Honor, QuestBridge Scholar
